

Dear Commissioners: I urge to oppose the enactment of BPL. BPL causes significant harmful noise / interference in the HF and VHF spectrum. This service increases the noise floor of a typical HF receiver by 50db or more, rendering the spectrum useless for almost any type of communication.

My concerns are the interference caused to the Amateur Service in particular. Amateur radio consistently demonstrates its value in nearly every situation, but most especially during national emergencies. BPL would cripple this support of Federal, State, and Local agencies in the event of future natural or terrorist disasters.
